

2 Jun 2017

Dear Mr. Hrehov,

Thank you for providing feedback to my group's presentation, your insights and knowledge as someone in an aviation field was very helpful to our understanding of the topic. You provided lots of insight into the lift equation and how each parameter affected the lift of the aircraft. I hadn't considered that the lift equation would be parabolic until you pointed out that it was because the velocity is squared. I also didn't think that the area of a planes wings would change as you change the flap setting. You helped me reach a deeper learning of the topic by helping guide me to finding the answer myself, instead of just telling me the answer. Again, thank you for your insight.

Sincerely,

Lucas ~~XXXXXXXXXX~~
